

Databricks Env Setup on GCP

Databricks

Metastore & Unity Catalog

Metastore \rightarrow ① It is Root level directory for the Catalogs.

② It is the place where we maintain the details of Metadata.

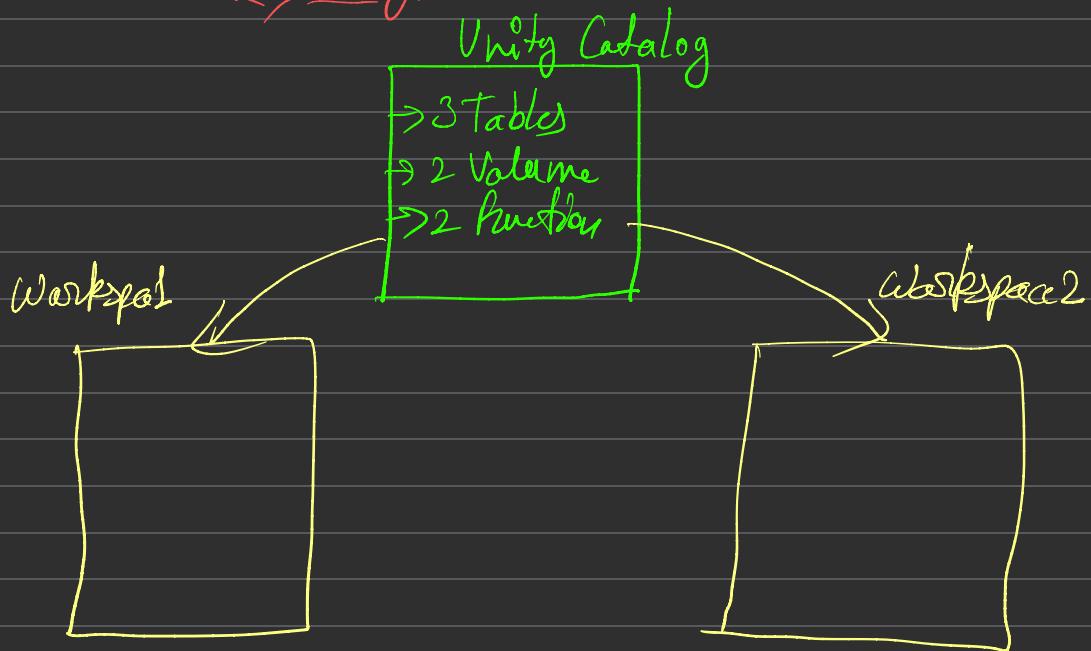

Unity Catalog \rightarrow ① It is the governance layer in databricks where we manage all the data assets.

\hookrightarrow Volumes \rightarrow Models
 \hookrightarrow Tables
 \hookrightarrow functions

Without Unity Metastore & Unity Catalog

With Unity Catalog

Created first
Workspace1

→ ①

If will create default
Metadata as well

→ ②

If will create default
Catalog as well
with the name of workspace

→ ③
